--2. (Amended) The information service method as set forth in claim 1, wherein the method is a method for buying the selected consumer commodity.

A3
--4. (Amended) The information service method as set forth in claim 3, wherein the selected consumer commodity and the information associated with the selected consumer commodity are switchably displayed on the child screen.

--5. (Amended) The information service method as set forth in claim 4, wherein the information associated with the selected consumer commodity contains at least information about a price of the selected consumer commodity and information about a name that distinguishes the selected consumer commodity.

A4
--7. (Amended) The information service method as set forth in claim 5, wherein the information associated with the selected consumer commodity further contains information representing how the selected consumer commodity is bought through a network.

--8. (Amended) The information service method as set forth in claim 4, wherein the information associated with the selected consumer commodity is information that designates a home page for the program of the program data.

A⁵ --11. (Amended) The information service method as set forth in claim 9, wherein the information associated with the selected consumer commodity contains at least information about a price of the selected consumer commodity and information about a name distinguishing the selected consumer commodity.

A⁶ --13. (Amended) The information service method as set forth in claim 11, wherein the information associated with the selected consumer commodity further contains information representing how the selected consumer commodity is bought through a network.

--14. (Amended) The information service method as set forth in claim 9, wherein the information associated with the selected consumer commodity is information that designates a home page for the program of the program data.

A⁷ --18. (Amended) An information service method, comprising the steps of:

synchronously transmitting program data and information associated with at least a program of the program data;

receiving the program data and the associated information;

reproducing the received program data and displaying the reproduced program data on a displaying device; and

extracting information associated with a portion desired

and selected by a viewer from the program data displayed on the displaying device from the information associated with the program.

A8
--21. (Amended) The information service method as set forth in claim 20, wherein the extracted information contains at least information associated with a price of the selected consumer commodity, information associated with a name that distinguishes the selected consumer commodity, information associated with a title of selected music, information associated with a name of a selected facility, and information representing a location of a selected facility. .

--22. (Amended) The information service method as set forth in claim 21, wherein the extracted information further contains information associated with a store from which one of the consumer commodity and a medium that contains the music can be bought.

--23. (Amended) The information service method as set forth in claim 21, wherein the extracted information further contains information representing how one of the consumer commodity and the music is bought through a network.

--24. (Amended) The information service method as set forth in claim 20, wherein the portion selected by the viewer is displayed on at least one of the displaying device and a

A⁸ displaying portion of a commander operated by the viewer.

A⁹ --27. (Amended) The information service method as set forth in claim 18, wherein the program data and the information associated with the program data are transmitted through a bi-directional communication network.

A¹⁰ --30. (Amended) A data terminal unit, comprising:
a processing portion for receiving program data and information associated with the program data and reproducing the received program data, the program data being transmitted through a communication network and the information being transmitted in synchronization with the program data;
a displaying portion for displaying the program data reproduced by the processing portion; and
a commander operated by a viewer,
wherein information associated with a portion desired and selected by the viewer is extracted from the program data displayed on the displaying portion from the information associated with the program.

--31. (Amended) The data terminal unit as set forth in claim 30, wherein the commander comprises a commander displaying portion and the data terminal unit displays the information associated with the portion desired by the viewer on at least one of the displaying portion and the commander displaying portion.

--32. (Amended) The data terminal unit as set forth in claim 31, wherein a picture of the portion desired by the viewer is displayed on the displaying portion and the commander displaying portion.

A10
cont

--33. (Amended) The data terminal unit as set forth in claim 32, wherein a child screen is formed on the displaying portion, the child screen switchably displaying the extracted information and the picture of the portion desired by the viewer.

A11

--35. (Amended) The data terminal unit as set forth in claim 30, wherein a home page for the portion desired and selected by the viewer from the program displayed on the displaying portion is accessed corresponding to the information associated with the program data through the communication network.

A12

--37. (Amended) A data transmitting and receiving apparatus, comprising:

a transmitting portion for synchronously transmitting program data and information associated with the program data through a communication network;

a processing portion for receiving the program data and the associated information that have been synchronously transmitted through the communication network and reproducing the received program data;

a displaying portion for displaying the program data reproduced by the processing portion; and

a commander operated by a viewer,

wherein information associated with a portion desired and selected by the viewer is extracted from the program data displayed on the displaying portion from the information associated with the program.

12. A crit
--38. (Amended) The data transmitting and receiving apparatus as set forth in claim 37, wherein the commander comprises a commander displaying portion and the data terminal unit displays the information associated with the portion desired by the viewer on at least one of the displaying portion and the commander displaying portion.

--39. (Amended) The data transmitting and receiving apparatus as set forth in claim 38, wherein a picture of the portion desired by the viewer is displayed on the displaying portion and the commander displaying portion.

--40. (Amended) The data transmitting and receiving apparatus as set forth in claim 39, wherein a child screen is formed on the displaying portion, the child screen switchably displaying the extracted information and the picture of the portion desired by the viewer.

A13
--42. (Amended) The data transmitting and receiving

apparatus as set forth in claim 37, further comprising a server device for storing the information associated with the program data, wherein the processing portion accesses a home page for the portion desired and selected by the viewer from the program displayed on the displaying portion corresponding to the information associated with the program data through the communication network.

*113
Amend*
--43. (Amended) The data transmitting and receiving apparatus as set forth in claim 37, wherein the transmitting portion multiplexes the information associated with the program data and transmits the multiplexed data so that the information associated with the program data is synchronized with a picture of the program data.

--44. (Amended) A data transmitting apparatus for transmitting program data and information associated with the program data so that the information associated with the program data is synchronized with a picture of the program data.

--45. (Amended) The data transmitting apparatus as set forth in claim 44, wherein the information associated with the program data is multiplexed with the program data and the multiplexed data are transmitted.--
